## Childhood Asthma Control Test for children 4 to 11 years old. Know the score.

Here are two asthma tests: one for children 4 to 11 years old on this page and one for teens 12 years and older on the back. They will provide a score that may help your doctor determine if your child's asthma treatment plan is working or if it might be time for a change. How to take the Childhood Asthma Control Test

Step 1 Let your child respond to **the first four questions (1 to 4).** If your child needs help reading or understanding the question, you may help, but let your child select the response. Complete the remaining **three questions (5 to 7)** on your own and without letting your child's response influence your answers. There are no right or wrong answers.

Step 2 Write the number of each answer in the score box provided.

Step 3 Add up each score box for the total.

Step 4 Take the test to the doctor to talk about your child's total score.

If your child's score is 19 or less, it may be a sign that your child's asthma is not controlled as well as it could be. Bring this test to your doctor to talk about your results.
